

AquaFinesse® Spa Clean

Thoroughly cleans your spa from the inside out!

Deep cleaning the interior and pipe work of your spa during the 3 monthly water change over.

Also ideal for use when treating a new spa or swapping over from traditional sanitisers to AquaFinesse®.

Instructions for use:

1. Remove the filter and open all valves. Raise the chlorine level in your spa to between 3-5ppm before beginning the deep clean process.
2. Ensure that all jets and air valves are set on the open position. Dissolve the SpaClean Tablet by keeping it in the flow of a running jet or add it to the basket above the removed filter. If you want you can also dissolve the tablet in a bucket with warm water before adding it to the spa water.
3. Activate pumps on full power for 20 minutes to allow a good flow *
4. Repeat the pump activation process at least 2 – 3 times during the deep clean.
Recommended treatment time is 6-12 hours, overnight. (Dependant on severity of problem)
5. Once the treatment is complete activate the pumps before you empty Spa / Hot tub, then rinse thoroughly with fresh water. Do not use any cleaner. Replace filters, refill with fresh tap water, and add a chlorine shock as normal.
6. Resume maintenance with AquaFinesse® hot tub water treatment

* If foam appears during the cleaning process please do not touch or inhale.

Keep cover closed. Keep out of reach of children. Do not use spa during the cleaning process.
