

AquaFinesse® Swimspa Box

In one simple weekly treatment our patented environmentally friendly formula gets to the root of the problem by loosening this layer of slime from the surfaces, it is then rinsed away by the action of the water and prevented from reforming. Result, a dramatic reduction in the levels of bacteria, needing only the minimal amount of sanitiser!

Even calcium, the notorious destroyer of swimspas, is not match against the power of AquaFinesse®.

Instructions for use:

1. Regularly rinse and clean the filters (we recommend AquaFinesse® Filter cleaning tablets for this purpose) the filter is an important element of the water treatment process; therefore it is essential that filters are kept clean.
2. (Vacuum) clean the bottom of your swim spa on a regular basis.
3. Maintain water levels at the height recommended by the manufacturer.
4. If possible, start with clean water; add a chlorine tablet and an AquaFinesse® water care tablet to the floating dispenser and/or the skimmer.
5. Replace the AquaFinesse® water care tablet on the same day each week.

Each AquaFinesse® water care tablet treats between 8,000 – 10,000 litres of water for a 1 week period. Please do not overdose.

*Always ensure that there is a chlorine tablet present in the dispenser and/or skimmer (Do not allow the chlorine tablet to run out completely, replace when necessary)

Just some of the benefits of using AquaFinesse® SWIMSPA water treatment:

- Clean, crystal clear water with no slimy walls or scale build up
- Helps to stabilise and maintain pH levels
- Eco-friendly, no complicated measurements and adjustments
- User-friendly
- Gentle on the bather and the environment
- Dramatically extends the life of your spas equipment
